

UNAI MEMBER ACTIVITY REPORTS 2013-2014

Polytechnique Montréal

Canada

During the 2013-14 reporting period, Polytechnique Montréal has engaged in a number of activities that underscore its on-going commitment to UNAI and its principles. The following example stands out as particularly notable:

In 2014, Polytechnique Montréal conducted an investigation into the energy efficiency of their escalator system. By examining user flows and consumption projections related to on-campus escalator use throughout the average day, investigators concluded that it would be profitable to integrate systems of variable speed escalators in order to promote energy savings and sustainability. This is a relatively straightforward solution to implement, as it does not require the complete dismantling of equipment currently in place, meaning less investment and a simplified implementation from a technical point of view.
